

KREBS TEX SPOTTING GUNS

Electric Sprayers for Cleaning Textiles

Precision Equipment to Meet the Spot Removal Needs of Manufacturers, Screen Printers and Dry Cleaners.

Krebs Tex Spotting Guns are designed to project cleaning fluid at high pressure through the stained textile. The pulsating action of the gun, combined with the solvency of the cleaning agent, forces the stain through the garment. Krebs Tex Spotting Guns are tough, lightweight, corrosion-free and built to last. All models come with a unique adjustable nozzle which varies the spray pattern from a pin-point jet to a wide mist. A nozzle guard helps to prevent accidental injuries from the high pressure stream.

Krebs Tex Spotting Guns may be used by apparel manufacturers to remove oil, grease, dirt and alteration marks. Textile screen printers can use Krebs Tex Spotting Guns to remove ink smudges from imprinted apparel. Dry Cleaners can use Krebs Tex Spotting Guns on a spotting board to force out tough stains before or after the dry cleaning bath.

Krebs Tex Spotting Guns feature the most modern, ergonomic design to provide optimum balance and quick trigger response along with maximum operator control and visibility. The special quick release knob allows for easy access to the pump for fast servicing. Only Krebs Tex Spotting Guns are suitable for continuous non-stop spraying, day in and day out.

Item No. 1260 - 110-20V, 60Hz. Item No. 1267 - 110-20V, 50Hz.

Item No. 1271 - 110-20V, 60Hz. Item No. 1273 - 220-40V, 50Hz.

Item No. 1277 - 110-20V, 60Hz. Item No. 1278 - 220-40V, 50Hz.

The **Krebs Tex-3** is available in two versions; with a self contained 20 oz. canister or with a direct-feed solvent tube. For lower volume spot cleaning, or where portability is important the canister model is recommended. For higher volume spot cleaning, the direct feed version eliminates the need to refill the bottle and reduces the weight of the cleaning gun.

The **Krebs Tex-5 Spot Cleaning Gun with Hot-Air Drying** (patent pending) provides a method of drying slower evaporating hydrocarbon solvents. The heating bar is made for attachment to the Krebs Venta-8 Spot Cleaning Station. The compressed air can then be adjusted on a sliding scale to reduce the drying time.

Albatross is the exclusive North American distributor for Krebs Spot Cleaning Systems.

Krebs Air Dryer Attachment (No. 1262) attaches to the Tex-3 Gun for simultaneous cleaning and drying (of fast evaporating solvents). Quick drying prevents the formation of "rings." Air dryer connects in seconds to your central air or compressor.

Krebs Direct-Feed Attachment (No. 1263) allows you to convert a bottle feed Tex-3 Gun to a direct feed version. With this flexibility, if your spot cleaning demands change, you can switch from one version to another without having to buy a new cleaning gun.

Spot Gun Balancer (No. 5001) allows you to suspend your cleaning gun to reduce operator fatigue and prevent damage to the cleaning gun. The balancing spring makes the cleaning gun feel "weightless." Tension and cable stop position may be adjusted to meet your needs.
