

Intricate markers, one of a kind patterns, samples, reworks, even plastic and rubber sheeting are all big problems in any cutting room... unless an Eastman lightweight rotary shear is at hand.

Offering the ultimate in maneuverability, these Eastman knives are the solution to those low quantity cutting jobs common to the industry.

Chickadee®/Model D2

The smallest round knife available, the Chickadee® II replaces hand held shears. Powered by Eastman's Perma-Field Motor, the Chickadee II has 40% more power than any other hand held knife its size. This, combined with its streamlined, lightweight construction, helps eliminate operator fatigue. Equipped with either a round blade for general use or a hexagon blade for sheer or difficult to cut cloth, the Chickadee II has a cutting capacity 25% greater than competitive models.

The Chickadee II also features a totally enclosed sharpener for faster and safer sharpening, easily accessible motor brushes for quick and easy servicing and an integrated power switch for rapid response and fatigue free operation. The Eastman Chickadee II is versatile too. Four different base plates and cutting tips can be selected depending on your specific use.

- **Stabilizer Shoe:** The standard foot attachment, a utility feature that lends itself well to all cutting and slitting operations.
- **Ball Tip:** Best when slitting tubular knits or other loosely woven materials.
- **Broad Stabilizer:** For those ap-

plications where slightly more stability is necessary, useful for eliminating distortion between plies.

- **Baseplate:** A small baseplate fitted with needle rollers to create the lightest free standing rotary shear available. Provides the greatest degree of accuracy from top to bottom ply.

Long Handle Chickadee® Model D2H

Encompassing all the features of the D2, with the addition of a long handle and remote power switch. The ideal companion to any spreading machine for cutting out flaws or when laying up fabrics.
